SUPPORT

[Our Blog](#)

Thank you for purchasing this theme. If you have any questions that are beyond the scope of this help file, please feel free to start new ticket on this page. Thanks so much!

Scope of free support

We can help you with:

1. Responding to questions or problems regarding the item and its features
2. Fixing any discovered item's bugs
3. Providing updates to ensure compatibility with new software versions

## 0.1 HTML Structure

This theme is built upon bootstrap framework and is fully responsive. It adapts to window resolution and looks good on all devices including iPad and iPhone.

See for yourself (resize your browser).

## Grid System and Single row structure

The default Bootstrap grid system utilizes 12 columns. It's responsive grid and adapts to viewport. Below 767px viewports, the columns become fluid and stack vertically. The fluid grid system uses percents instead of pixels for column widths. Each row always include 12 columns (for example col-md-8 + col-md-4 = col-md-12).

Bootstrap documentation: [here](#)

### Basic grid HTML:

```
1 <div class="row">
2   <div class="col-md-1">.col-md-1</div>
3   <div class="col-md-1">.col-md-1</div>
4   <div class="col-md-1">.col-md-1</div>
5   <div class="col-md-1">.col-md-1</div>
6   <div class="col-md-1">.col-md-1</div>

## 0.1 CSS files and structure

If you would like to edit the color, font, or style of any elements, you would do the following:

```

1  #primaryContent a {color: #someColor;}

```

If you find that your new style is not overriding, it is most likely because of a specificity problem. Scroll down in your CSS file and make sure that there isn't a similar style that has more weight.

I.E.

```
1 #wrap #primaryContent a {color: #someColor;}
```

So, to ensure that your new styles are applied, make sure that they carry enough "weight" and that there isn't a style lower in the CSS file that is being applied after yours.

## Colors

The theme includes a css file wic you can use to edit the colors.

You just need to add the corresponding CSS file to the head of the page like this:

```
1 <head>
2   (..)
3   <link rel="stylesheet" type="text/css" href="css/motive.css">
4   (..)
5   </head>
```

## Icons

We've included 360+ font icons.

Awesome Icons – <http://fontawesome.io/icons/>

## 0.1 Fancy Contact Form

All needed files are in /form directory.

Remember to include on page.

To **configure** form just edit *form/config.php* and change e-mails to your own :

```
1 $to = "mail@example.com";  
2 $from = "mail@example.com";
```

That's it!
